Eligibility

Form Title	Eligibility
Prefix [optional]	Ms.
First Name	Pavni
Last Name	Manocha
For which scholarship are you applying? (Applications with an incorrect region selected will be unsubmitted and not reviewed.)	Generation Google Scholarship: for women in computer science (Asia Pacific/APAC)
In the 2024-2025 academic year I am/was enrolled as a full-time second or third year undergraduate student in Asia Pacific. I intend to continue pursuing a full-time bachelor's program at an accredited university in Asia Pacific for the 2025-2026 academic	Yes
My major field of study in college or university is or will be computer science, computer engineering, or a closely related technical field.	Yes
{{Privacy-Policy-English-Privacy-Policy-Heading}}	
{{Privacy-Policy-Form-Field-Label}}	Yes

Educational Information

Form Title	Educational Information
High School Information	
Name of High School	Hartmann College
Country of High School	India
High School Start Date	06/2022
High School Graduation (or expected graduation) Date	03/2023
High School Dates Check (Admin)	273
Your High School GPA (average or cumulative)	3.6
Maximum GPA Available (eg: 4.0 or 100)	4
College/University Information	
I am currently in college or university, pursuing a bachelor's degree. You may want to review the scholarships' eligibility criteria.	Yes
Current College/University	
Your College/University GPA (average or cumulative)	9.1
Maximum GPA Available (eg: 4.0 or 100)	10
What is/was your current year in school for the 2024-2025 academic year?	2nd Year
What is your current college major?	Computer Science
Current college or university	Graphic Era Hill University
Current college or university city	Bhimtal
Current college or university country	India
Current college or university date of enrollment	08/2023
Are you a visiting or exchange student at your current college or university?	No
Are you planning to attend the same college or university in 2025-2026?	Yes

Activities

Activity 1			
Activity	Research Intern		
Activity Type	Paid or unpaid internship	Current Activity	Y
From	06/2025	To	
Average Hour Per Week	60	Est. Total Hours	480
Additional Description	As an intern, I learned about status codes and created our own custom set for the project. I logged all the errors and pushed them to the Firestore database. I also contributed to the Indian traffic da		

Activity 2			
Activity	Frontend Developer		
Activity Type	Volunteer work	Current Activity	N
From	03/2025	To	05/2025
Average Hour Per Week	10	Est. Total Hours	90
Additional Description	I wanted to volunteer in person but with limited summer holidays I chose online volunteering instead. I revamped the Aapke Saath Foundation NGO's website and worked closely with the stakehold		

Activity 3			
Activity	Bootcamp Leader & Cultural Mentor		
Activity Type	Leadership program	Current Activity	N
From	07/2024	To	07/2024
Average Hour Per Week	25	Est. Total Hours	25
Additional Description	I led a five day coding bootcamp for over 50 students, planning lessons and running hands-on workshops. As a Kathak graduate, I also taught Kathak dance to 20+ girls helping them build confiden		

Activity 4			
Activity	IEEE Research Event Organizer		
Activity Type	Volunteer work	Current Activity	N
From	02/2025	To	02/2025
Average Hour Per Week	36	Est. Total Hours	36
Additional Description	I served on the Accommodation Team for the IEEE Research Event in February 2025. I, along with my team, coordinated logistics for over 100 attendees, handling room bookings, check-ins and sc		

Activity 5			
Activity	Diabetes Prediction Model		
Activity Type	Academic club	Current Activity	N
From	02/2025	To	05/2025
Average Hour Per Week	5	Est. Total Hours	60
Additional Description	Me and my team built a Diabetes Prediction Model using machine learning. We created a user-friendly web interface that asks users for inputs like insulin level, BMI and glucose. Based on their res

Form Title	Essays
What impact will the scholarship have on your academic goals? Describe any financial circumstances affecting your need for a scholarship. (limit: approximately 100 words)	Receiving this scholarship would significantly reduce the financial burden on my family and help me support them as an individual. I come from a middle-class background where expenses are tightly managed. Two years ago, my mother was diagnosed with cancer and since then a major portion of our family savings have gone towards her treatment and ongoing care. Despite these challenges, I have stayed focused on my academics and tech pursuits. Being in a Tier-3 college, with limited access to top-tier resources, I often struggle to afford quality courses, certifications, and tools. This scholarship would help bridge that gap.
Essay 1: Tell us about a time when you faced a complex problem without a clear path to a solution. Describe the steps you took to get to the solution in detail. What resources and solutions did you consider? What did you learn from this experience? Keep in	During one of my technical projects, I was tasked with building a real-time error logging and monitoring system for a bus transportation setup. The system involved several moving parts like GPS, camera feeds, machine learning modules and hardware interfaces, and we needed a way to track what was happening in each part, especially when and where the things went wrong. There was neither any reference nor any template to follow. Just a vague goal which was to build a system that could log, categorize and help debug problems. I had never built something like this before and the lack of a clear path made it me even more miserable. I started by trying to understand what large systems do for logging. Looked into tools like Prometheus, Sentry, and Firebase Crashlytics but most of them were too complex or not a good fit for our use case. So I decided to build my own solution that would be lightweight and flexible. I created a set of custom status codes, each color-coded and categorized by severity: info, debug, warning, error and critical. Then, I designed a yaml configuration to define how each component should log data. I wrote Python scripts to log everything into CSVs and for critical issues I pushed those logs directly to Firestore. There were many moments where things didn’t work like Firebase would randomly fail, logs weren’t showing up or errors were not getting caught at all. I had to keep breaking the problem into smaller pieces, test one component at a time and write tons of print statements just to understand what was going wrong. This whole process taught me a lot more than just coding. I learned how to build something from square one when there is no guide. I became more confident in debugging and understanding error messages, tracing issues and testing patiently. Every log message, every decision had to be useful not just to me but to anyone else who might work on the system later. Looking back, what felt like a confusing, frustrating challenge ended up becoming one of the most rewarding learning experiences I have had. I did not just solve a problem instead I created a tool that would help others using this project solve problems faster. And I did it by figuring things out on my own, asking questions, experimenting and not giving up when

nothing made sense at first.

Essay 2: From your personal experience, describe a barrier that prevents equitable access to the field of technology. What do you believe is the root cause? What actions have you taken to address this inequity and what actions do you plan to take? Please f

Growing up in a small town with limited resources, I witnessed firsthand how girls are often left out of conversations around technology. In my own school, a handful of girls considered tech as a serious career path. The problem was not ability, instead it was access, encouragement, and exposure.

A major barrier preventing equitable access to technology is the deeply ingrained belief that tech is “too complicated" or "not meant for girls.” These limitations create self-doubt early on, long before any actual opportunity arises.

To challenge this narrative, I led a five-day coding bootcamp for over 50 students, many of them girls, where I taught programming basics and organized hands-on workshops under a NGO. I designed sessions to be friendly, beginner-level, and fun focusing not just on logic, but on building confidence. Watching the girls get excited by writing their first few lines of code felt like the exact impact I had always wished to make.

As a Kathak graduate who also teaches dance sometimes, I often use my classes as informal spaces to talk about self-expression, creativity and tech. I have mentored 20+ girls through dance, helping them understand that being artistic and being technical are not mutually exclusive. I try to show them that a small town girl who dances barefoot to classical rhythms can also code, debug, and dream big.

But I don’t want to stop here. One thing I do is share my tech journey on LinkedIn in an honest and relatable tone. My DMs are open to any girl who wants help getting started. Even simple storytelling can inspire someone who feels tech is not meant for them. I also hope to collaborate with NGOs to introduce basic coding modules in government schools and eventually build a mobile-first platform in Hindi to teach programming in a more approachable way.

My mission is to ensure that no girl has to wait for permission to be curious about tech or in fact, anything at all. Equitable access doesn’t just mean having a laptop, it means having someone to believe in you, relatable examples to look up to and the chance to try, fail and grow. I want to be that someone for the girls around me.

Family and Household

Form Title	Family and Household
In 2024, what was your family size?	4
In 2024, what was your family's Adjusted Gross Income (AGI)?	$10,001 to less than $20,000
Describe any financial circumstances affecting your need for a scholarship. In your answer be sure to describe any obstacles you have overcome to get to where you are today. What goals will this scholarship enable you to accomplish?	Coming from a small town middle-class family, finances have always been tight. My mother was diagnosed with cancer during my mid-teens, which brought an emotional toll and financial strain. I have also been managing PCOD, requiring ongoing treatment, while she continues with her medications. Despite these challenges, I have remained focused on academics, learning to code through free resources, and maintaining strong grades mostly to keep my mom proud and hopeful about our future. I have balanced ambition with responsibility whether it is helping at home or managing expenses in college. This scholarship would ease the burden of affording advanced courses and essential tech tools. More importantly, it would give me the space to focus on real-world projects and mentor girls like me, showing them that where you come from does not define where you can go.
